## Risk Insight 1.1 Release Notes

Risk Insight is an ArcSight ESM add-on that enables Risk Managers and Security Operation Center (SOC) Managers to analyze security risk information in a business context and prioritize actions to minimize that risk. Security risk information is processed periodically providing continuous monitoring capabilities on the risks imposed on your organization's assets.

### What's New

This version of Risk Insight is considered maintenance release with following minor changes:

- Installer/Uninstaller available to operate in console mode
- Omitting the connector configurator tool for ArcSight SmartConnectors
- Splitting up report for the ESM AssetSync job to minimize execution runtime for group-based asset model
- Vulnerability dictionary updated as of November 2015
- Vulnerability dictionary not being populated during the installation to speed up the deployment
- Ability to save and load multiple asset tree views in Asset Profiling and Risk Indicators
- Cron expressions in jobs configuration replaced with intuitive user interface
- Updated resource paths of arb-package contents
- Updated embedded version of SAP BusinessObjects Enterprise to Service Pack 7 including Fix Pack 2
- Replaced SAP BusinessObjects Enterprises Client Tools Web Intelligence with server side Web Intelligence thin client

### Supported Platforms

Risk Insight 1.1 is compatible with ArcSight ESM 6.9.1c.

See the HP Arcsight ESM Support Matrix available on the Protect 724 site for details on ArcSight ESM 6.9.1c platform and browser support.

## Release Contents

File Name	Description
Risk_Insight_1.1_Release_Notes.pdf	Product description and open issues (this document).
Risk_Insight_1.1_Administration_Guide.pdf	Product configuration instructions and product contents description.
Risk_Insight_1.1_Deployment_Guide.pdf	Product installation instructions.
Risk_Insight_1.1_User_Guide.pdf	Product operation instructions.
ArcSight_RiskInsight_1.1.iso	Installation media for the product.

## Open Issues in this Release

This release contains the following open issues:

## Language Support

Number	Description
RSI-8489	Risk Insight is supported only in the English language: <ul style="list-style-type: none"><li>• User facing text is available only in English.</li><li>• User-created content is supported only in English, but might work for some Western languages.</li></ul>

## Browser Support

Number	Description
RSI-8713	The color indication in the Overall Score Heat Map does not work properly if you are using a client running on a Safari browser. <b>Workaround:</b> Open this dashboard in another browser supported by ArcSight ESM. For information on supported browsers, see HP ArcSight ESM Support Matrix.

Number	Description
RSI-9011	If you are using a client running on an Internet Explorer version 10 browser, dashboard components (both out-of-the-box and custom dashboards) cannot be resized.
RSI-9021	If you are using a client running on an Internet Explorer browser, the dashboard builder opens in a new browser window.
RSI-11376	<p>When using a client running on an Internet Explorer 11 browser, the Component Gallery in the Dashboard Builder does not display properly. Some functionality may be impaired.</p> <p><b>Workaround:</b> Configure your browser to be compatible with Internet Explorer 10.</p>
RSI-6575	<p>You cannot import configuration data to Risk Insight if you are using a client running on a Firefox browser.</p> <p><b>Workaround:</b> Open Risk Insight from a Chrome or an Internet Explorer browser.</p>

## Dashboards

Number	Description
RSI-8974	<p>In the dashboards, the drill-down capability that supports root cause analysis is only available for assets that are displayed in the Asset Selector. Assets that are not displayed in the Asset Selector, but are displayed in one of the dashboard components, will have faulty links.</p> <p>For example, suppose that you want to evaluate asset A in the Risk Register. After you open the Risk Register and select asset A in the Asset Selector, you can see that there are five children assets with high risk scores displayed in the First Level Children Summary component—assets B, C, D, E, and F. Asset B has the highest risk score and you would like to determine the cause of this high score. Asset B is not displayed in the Asset Selector due to a large business model. If you click asset B First Level Children Summary component, then the application will not respond.</p> <p><b>Workaround:</b> Click the Show More link at the bottom of the asset list in the Asset Selector. Locate the child asset that you want to analyze. After you find this asset in the asset list (you might need to click Show More a few times), then the child asset link will work as expected in the various components.</p>
RSI-8986	<p>If you try to open a dashboard after a session timeout, then you will get an error message (instead of the login page).</p> <p><b>Workaround:</b> Click the Refresh button. You will be redirected to the login page.</p>

Number	Description
RSI-8874	<p>If you try to open a dashboard page that has been deleted (a dashboard page might still appear as an option in the navigation bar menu because the menu was not yet refreshed), then you will receive an error message. The error message does not close properly.</p> <p><b>Workaround:</b> Click the Refresh button. You will be redirected to the Risk Indicators page.</p>
RSI-6761	<p>The information displayed in a dashboard component is limited to the size of the component in the UI and the screen size. In cases when the information exceeds the component size, then the information displayed is partial.</p>

## Installation

Number	Description
RSI-18847	<p>When using a console mode installer to deploy Risk Insight, uninstaller (uninstaller.jar) is being corrupted, preventing uninstall process to run automatically.</p> <p><b>Workaround:</b> Manually remove /usr/local/riskinsight folder contents. Drop 'bri' schema from CORR database and remove the Risk Insight Universe and folder contents using CmcApp of SAP BusinessObjects.</p>

# Send Documentation Feedback

If you have comments about this document, you can [contact the documentation team](#) by email. If an email client is configured on this system, click the link above and an email window opens with the following information in the subject line:

## **Feedback on Release Notes (Risk Insight 1.1)**

Just add your feedback to the email and click send.

If no email client is available, copy the information above to a new message in a web mail client, and send your feedback to [arc-doc@hp.com](mailto:arc-doc@hp.com).

We appreciate your feedback!
