Documentation updates

The title page of this document contains the following identifying information:
- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

You can check for more recent versions of a document through the MySupport portal. Many areas of the portal, including the one for documentation, require you to sign in with a Software Passport. If you need a Passport, you can create one when prompted to sign in.

Additionally, if you subscribe to the appropriate product support service, you will receive new or updated editions of documentation. Contact your Micro Focus sales representative for details.

Support

Visit the MySupport portal to access contact information and details about the products, services, and support that Micro Focus offers.

This portal also provides customer self-solve capabilities. It gives you a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the MySupport portal to:

- Search for knowledge documents of interest
- Access product documentation
- View software vulnerability alerts
- Enter into discussions with other software customers
- Download software patches
- Manage software licenses, downloads, and support contracts
- Submit and track service requests
- Contact customer support
- View information about all services that Support offers

Many areas of the portal require you to sign in with a Software Passport. If you need a Passport, you can create one when prompted to sign in. To learn about the different access levels the portal uses, see the Access Levels descriptions.

Contents

New in this Release

This section lists the enhancements to Find version 12.1.0.

- When a user chooses a saved search for comparison, snapshot searches now have a camera icon in the header to make them easier to identify. In addition, the layout of the comparison page has been improved to include more text, and so that users can view the full text by hovering over the search.

- You can now use the document weight in your custom templates. The `weight` property is now included in the handlebars context.

- Find now uses the `Recurse` option when it retrieves user roles from the IDOL Community component, which allows you to use nested roles to simplify authentication. For example, if you have an existing *Administrator* role in Community, you can use the Community `RoleAddRoletoRole` action to add it to the **FindAdmin**, **FindBI**, and **FindUser** roles in Community to give your administrator users access without explicitly adding them to every role.

- The `idol-access.log` (if enabled) now logs requests that fail without returning a HTTP status code (for example, when IDOL Server is off, blocked by a firewall, or the DNS name cannot be resolved).

- The "Select parametric filters" dialog box is wider. When you hover the mouse pointer over a field name a tooltip is displayed that contains the complete field name. This makes it easier to read long field names, especially when the name is truncated due to the width of the dialog box.

- The default search result and promotion templates have been updated to show a hyperlink (URL) for each result, if one is available, instead of the document reference. You can configure which IDOL document fields are used to populate the URL by changing the `fieldsInfo.url.names` list in the `config.json` configuration file.

- There is a new CSS class, `show-full-text`, that you can use in custom (handlebars) templates. For example, you can use this to show the full document title instead of truncating the title. The text wraps across multiple lines if necessary.

- Term links are highlighted in the **Similar documents** tab.

- You can now configure the number of results that load at once in list view scrolling by setting the `uiCustomization.listViewPagingSize` value.

- You can now choose which Combine method to use to combine your query results, by configuring the `combineMethod` property. You can also disable combining.

- When you highlight a term for entity search and then ask a question, the pronoun in the question is substituted with the entity.

Resolved Issues

This section lists the resolved issues in Find version 12.1.0.

- In summaries in the search result list, a placeholder could appear instead of a highlighted term when the phrase to be highlighted contained newline characters.

Documentation

The following documentation was updated for this release.

- *Find Administration Guide*
