Documentation updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for updated documentation, visit https://www.microfocus.com/support-and-services/documentation/.

Support

Visit the MySupport portal to access contact information and details about the products, services, and support that Micro Focus offers.

This portal also provides customer self-solve capabilities. It gives you a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the MySupport portal to:

- View information about all services that Support offers
- Submit and track service requests
- Contact customer support
- Search for knowledge documents of interest
- View software vulnerability alerts
- Enter into discussions with other software customers
- Download software patches
- Manage software licenses, downloads, and support contracts

Many areas of the portal require you to sign in. If you need an account, you can create one when prompted to sign in.

Contents

New in this Release

The following new features were released in Slack Connector version 12.12.0.

- The connector can synchronize messages that were sent or received by a specific list of users. To specify the list of users, set the new configuration parameter `ExplicitUsers`.

- The connector can synchronize messages that were created between two dates, specified by `MinMessageDate` and `MaxMessageDate`. You can use relative dates and synchronize a rolling window, for example all messages that are less than one month old. The parameter `IngestDeleteOldMessages` has been added so that you can choose whether to remove messages from the IDOL index when they become older than `MinMessageDate`.

- The documents created by the connector include additional metadata fields so that documents which represent messages can be linked with documents that represent attachments.

Resolved Issues

The following issues were resolved in Slack Connector version 12.12.0.

- The identifier for a document in an ingest-delete issued by the connector sometimes did not match the identifier of the indexed document. In some cases this could mean that documents were not deleted from the IDOL index.

- Messages could be detected as modified, and were ingested again, even though they had not been modified.

- **(Security update)** The third-party OpenSSL library has been upgraded to version 1.1.1n to resolve a security vulnerability, CVE-2022-0778.

Supported Operating System Platforms

Slack Connector 12.12.0 is supported on the following platforms.

Windows (x86-64)

- Windows Server 2019

- Windows Server 2016

- Windows Server 2012

Linux (x86-64)

The minimum supported versions of particular distributions are:

- Red Hat Enterprise Linux (RHEL) 7

- CentOS 7

- SuSE Linux Enterprise Server (SLES) 12

- Ubuntu 14.04

- Debian 8

Solaris (x86-64 and SPARC 64)

> **DEPRECATED:** Support for Solaris x86-64 and SPARC 64 was deprecated in IDOL version 12.10, for all IDOL components except KeyView. IDOL components are currently still available for Solaris, but might not be available in future.

- Solaris 11

- Solaris 10

Documentation

The following documentation was updated for Slack Connector version 12.12.0.
