Documentation updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for updated documentation, visit https://www.microfocus.com/support-and-services/documentation/.

Support

Visit the MySupport portal to access contact information and details about the products, services, and support that Micro Focus offers.

This portal also provides customer self-solve capabilities. It gives you a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the MySupport portal to:

- View information about all services that Support offers
- Submit and track service requests
- Contact customer support
- Search for knowledge documents of interest
- View software vulnerability alerts
- Enter into discussions with other software customers
- Download software patches
- Manage software licenses, downloads, and support contracts

Many areas of the portal require you to sign in. If you need an account, you can create one when prompted to sign in.

Contents

New in this Release

The following new features were released in View Component version 12.12.0.

- You can now configure View in Universal Viewing mode to send the `ReferenceField` parameter on the `GetContent` action that it sends to the document store to retrieve a document.

  ```
  [UniversalViewing]
  DocumentStoreReferenceField=DREREFERENCE
  ```

  This option can be useful if the reference in the front end, such as Find, is unique in the main field (for example `DREREFERENCE`), but might be associated with multiple documents in another field (for example `DREROOTPARENTREFERENCE`). This parameter ensures that the document store searches for matches only in the correct reference field.

Resolved Issues

The following issues were resolved in View Component version 12.12.0.

- Some highlight parameters were not added correctly to internal links. This issue could cause content in embedded frames to display incorrectly.

- **(Security update)** The third-party OpenSSL library has been upgraded to version 1.1.1n to resolve a security vulnerability, CVE-2022-0778.

Supported Operating System Platforms

View Component 12.12.0 is supported on the following platforms.

Windows (x86-64)

- Windows Server 2019

- Windows Server 2016

- Windows Server 2012

Linux (x86-64)

The minimum supported versions of particular distributions are:

- Red Hat Enterprise Linux (RHEL) 7

- CentOS 7

- SuSE Linux Enterprise Server (SLES) 12

- Ubuntu 14.04

- Debian 8

Solaris (x86-64 and SPARC 64)

> **DEPRECATED:** Support for Solaris x86-64 and SPARC 64 was deprecated in IDOL version 12.10, for all IDOL components except KeyView. IDOL components are currently still available for Solaris, but might not be available in future.

- Solaris 11

- Solaris 10

Notes

These notes provide extra information about installing and using View Component.

- An issue with highlighting was resolved in the Content component. View highlighting could insert additional characters into highlighted XML when the `Links` parameter contained overlapping (or identical) phrases where one phrase ended with another, for example `links="great big fish" "big fish"`. To resolve this issue, upgrade your Content component to version 12.12.0.

Documentation

The following documentation was updated for View Component version 12.12.0.

- *IDOL Server Reference*
- *IDOL View Component Reference*
- *IDOL Server Administration Guide*
