Documentation updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

You can check for more recent versions of a document through the MySupport portal. Many areas of the portal, including the one for documentation, require you to sign in with a Software Passport. If you need a Passport, you can create one when prompted to sign in.

Additionally, if you subscribe to the appropriate product support service, you will receive new or updated editions of documentation. Contact your Micro Focus sales representative for details.

Support

Visit the MySupport portal to access contact information and details about the products, services, and support that Micro Focus offers.

This portal also provides customer self-solve capabilities. It gives you a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the MySupport portal to:

- Search for knowledge documents of interest
- Access product documentation
- View software vulnerability alerts
- Enter into discussions with other software customers
- Download software patches
- Manage software licenses, downloads, and support contracts
- Submit and track service requests
- Contact customer support
- View information about all services that Support offers

Many areas of the portal require you to sign in with a Software Passport. If you need a Passport, you can create one when prompted to sign in. To learn about the different access levels the portal uses, see the Access Levels descriptions.

Contents

New in this Release

The following new features were released in IDOL Content Component version 12.3.0.

- The default configuration file for the standalone IDOL Content component has been improved, so that metadata fields commonly produced by IDOL connectors are optimized out-of-the-box.

- When you configure a custom stemming library, you can now defer transliteration until after stemming. In this case, Content sends untransliterated text to the library, and transliterates the results.

- Communications can be secured with TLS version 1.3.

Resolved Issues

The following issues were resolved in IDOL Content Component version 12.3.0.

- The Content component could fail to return documents when a query began with a stopword followed by the `NOT` operator.

- If Content was restarted when a custom stemming library was configured, the logs wrongly reported that this setting had been changed, requiring a reindex, even if the value of the setting had not changed.

- Content started even if a custom stemming library failed to load. To ensure index consistency, Content now logs an error and exits if a configured custom stemming library cannot be loaded successfully.

- The `DRECOMPACT` index action could incorrectly remove unstemmed terms that continued to meet the `UnstemmedMinDocOccs` threshold, when terms occurred in multiple sections of deleted documents.

Documentation

The following documentation was updated for this release.

- *IDOL Expert*

- *IDOL Getting Started Guide*

- *IDOL Server Reference*

- *IDOL Content Component Reference*

- *IDOL Server Administration Guide*
