Documentation updates

The title page of this document contains the following identifying information:
- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for updated documentation, visit https://www.microfocus.com/support-and-services/documentation/.

Support

Visit the MySupport portal to access contact information and details about the products, services, and support that Micro Focus offers.

This portal also provides customer self-solve capabilities. It gives you a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the MySupport portal to:

- Search for knowledge documents of interest
- Access product documentation
- View software vulnerability alerts
- Enter into discussions with other software customers
- Download software patches
- Manage software licenses, downloads, and support contracts
- Submit and track service requests
- Contact customer support
- View information about all services that Support offers

Many areas of the portal require you to sign in. If you need an account, you can create one when prompted to sign in. To learn about the different access levels the portal uses, see the Access Levels descriptions.

Contents

New in this Release

The following new features were released in Connector Framework Server version 12.6.0.

- Eduction can output the number of matches found for each entity, instead of the matched text, position, and score. To use this feature set the new configuration parameter `CountOutput` to `TRUE`.

- You can configure the depth at which CFS stops extracting sub-files from a container, by setting the new parameter `ImportExtractMaxDepth`. The default value is infinite, which matches the behavior of earlier versions of CFS.

- You can configure WKOOP HTML extraction so that it does not download certain resources, such as scripts or advertisements, that appear in block lists. This can result in fewer HTTP requests, increase processing speed, and prevent unwanted content from contaminating your IDOL index. To use this feature, set the new configuration parameter `BlockingFiltersDirectory`.

- New import tasks and Lua functions to encrypt and decrypt files using Micro Focus Voltage SmartCipher.

Resolved Issues

There were no resolved issues in Connector Framework Server version 12.6.0.

Notes

- ACI Encryption has been deprecated. Instead of using ACI encryption, Micro Focus recommends configuring Secure Socket Layer (SSL) connections between ACI servers and applications.

  You can use GSS authorization without using ACI encryption by configuring the `GSSServiceName` and `RequireGSSAuth` parameters.

  ACI encryption is still available for existing implementations, but it might be incompatible with new functionality. The functionality might be deleted in future.

Documentation

The following documentation was updated for Connector Framework Server version 12.6.0.

- *Connector Framework Server Administration Guide*
- *Connector Framework Server Reference*
