Documentation updates

The title page of this document contains the following identifying information:
- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for updated documentation, visit https://www.microfocus.com/support-and-services/documentation/.

Support

Visit the MySupport portal to access contact information and details about the products, services, and support that Micro Focus offers.

This portal also provides customer self-solve capabilities. It gives you a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the MySupport portal to:

- Search for knowledge documents of interest
- Access product documentation
- View software vulnerability alerts
- Enter into discussions with other software customers
- Download software patches
- Manage software licenses, downloads, and support contracts
- Submit and track service requests
- Contact customer support
- View information about all services that Support offers

Many areas of the portal require you to sign in. If you need an account, you can create one when prompted to sign in. To learn about the different access levels the portal uses, see the Access Levels descriptions.

Contents

New in this Release

The following new features were released in IDOL Community Component version 12.6.0.

- The Community component can now start up without its supporting Content components (the data index and the agentstore). In this case, Community logs a warning that indicates that some functionality might not be available until Content becomes available.

  When you have configured `AutoSetDatabases` for `[Role]`, Community periodically refreshes the value of the databases privilege for the default role. By default, it refreshes the value every 60 seconds. You can modify this interval by setting the new `RefreshDBPrivilegesCycleDuration` configuration parameter in the `[Role]` section.

Resolved Issues

The following issues were resolved in IDOL Community Component version 12.6.0.

- On UNIX platforms, Community was unable to communicate correctly with LDAP over SSL/TLS. This issue affected Community versions 12.3.0 to 12.5.0.

Notes

These notes provide extra information about installing and using IDOL Community Component.

- ACI Encryption has been deprecated. Instead of using ACI encryption, Micro Focus recommends configuring Secure Socket Layer (SSL) connections between ACI servers and applications.

  You can use GSS authorization without using ACI encryption by configuring the `GSSServiceName` and `RequireGSSAuth` parameters.

  ACI encryption is still available for existing implementations, but it might be incompatible with new functionality. The functionality might be deleted in future.

Documentation

The following documentation was updated for IDOL Community Component version 12.6.0.

- *IDOL Expert*
- *IDOL Getting Started Guide*
- *IDOL Server Reference*
- *IDOL Community Component Reference*
- *IDOL Server Administration Guide*
