Documentation updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for updated documentation, visit <https://www.microfocus.com/support-and-services/documentation/>.

Support

Visit the [MySupport portal](#) to access contact information and details about the products, services, and support that Micro Focus offers.

This portal also provides customer self-solve capabilities. It gives you a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the MySupport portal to:

- Search for knowledge documents of interest
- Access product documentation
- View software vulnerability alerts
- Enter into discussions with other software customers
- Download software patches
- Manage software licenses, downloads, and support contracts
- Submit and track service requests
- Contact customer support
- View information about all services that Support offers

Many areas of the portal require you to sign in. If you need an account, you can create one when prompted to sign in. To learn about the different access levels the portal uses, see the [Access Levels descriptions](#).

Contents

- New in this Release 4
- Resolved Issues 5
- Supported Operating System Platforms 6
- Documentation 7

New in this Release

The following new features were released in Salesforce Connector version 12.8.0.

- Tasks scheduled to start at the same time run in the order that they are enumerated by the *N* parameter (in the [FetchTasks] section of the configuration file).
- Scheduled actions that have the same start time now run in the order that the schedules were created (with `action=schedule`).
- The `Admin` action was modified to ensure that the IDOL Admin interface can not run in an `iframe`, to improve clickjacking protection.

Resolved Issues

The following issues were resolved in Salesforce Connector version 12.8.0.

- A SynchronizeGroups task would fail when the connector attempted to retrieve a group or role that had been deleted. The connector now logs a warning rather than failing the task.
- The connector could terminate unexpectedly if an error occurred when synchronizing groups.
- The server could terminate unexpectedly when an authorization role was configured and the list of Clients included a hostname with a wildcard, such as *.domain.example.com. The Clients parameter accepts wildcards only in IP addresses.

Supported Operating System Platforms

Salesforce Connector 12.8.0 is supported on the following platforms.

Windows (x86-64)

- Windows Server 2019
- Windows Server 2016
- Windows Server 2012

Documentation

The following documentation was updated for Salesforce Connector version 12.8.0.
